

a third server, linked to the first server and the second server to edit the events page;

a locator linked to the network, the locator ~~[[is]]~~ being configured to receive update data from the third server and ~~locates~~ locate the predetermined personal calendar; and

a fifth server linked to the network and to the predetermined personal calendar, wherein the fifth server receives the update data from the ~~fourth server~~ locator, and the fifth server automatically updates the predetermined personal calendar in accordance with the update data.

2. (Original) The system of claim 1, wherein the update data includes an updated events page.

3. (Original) The system of claim 1, wherein the network is the Internet.

4. (Original) The system of claim 1, wherein the locator and the fifth server are linked to the network via at least one of a telephone line, a dedicated computer connection, a satellite connection and a cellular telephone network connection.

5. (Original) The system of claim 1, wherein the third server and the second server are linked to the first server via a Hyper Text Transfer Protocol link or a Transport Control Protocol link.

6. (Currently Amended) The system of claim 1, wherein the predetermined personal calendar is stored in a sixth server which is linked to the fifth server.

7. (Currently Amended) The system of claim 1, wherein the predetermined personal calendar is a commercially available Internet linked calendar.

8. (Original) The system of claim 7, wherein the update data is converted to correspond to the commercially available Internet linked calendar.

9. (Currently Amended) The system of claim 1, wherein the locator comprises an e-mail interface, the e-mail interface forwards a message via e-mail that the predetermined personal calendar has been automatically updated in accordance with the update data.

10. (Original) The system of claim 1, wherein the locator comprises an e-mail interface, the e-mail interface forwards a message via e-mail that the events page has been edited.

11. (Currently Amended) A method of automatically updating a predetermined personal calendar linked to a network, comprising:

forwarding update data to a locator, wherein the locator is linked to the network;

locating the predetermined personal calendar using subscriber data stored in the locator;

forwarding the update data from the locator to a first server, wherein the first server is linked to the network and linked to the predetermined personal calendar; and

using the update data to update the predetermined personal calendar corresponding to the subscriber data.

12. (Original) The method of claim 11, further comprising forwarding an Automatic Subscriber message or a Non-Automatic Subscriber message to subscribers through the network.

13. (Original) The method of claim 11, wherein the network is the Internet.

14. (Currently Amended) The method of claim 11, wherein the predetermined personal calendar is stored in a second server which is linked to the first server.

15. (Currently Amended) The method of claim 11, wherein the predetermined personal calendar is a commercially available Internet linked calendar.

16. (Currently Amended) A computer-readable medium encoded with a plurality of processor executable instruction sequences for:

forwarding update data to a locator, wherein the locator is linked to the network;

locating the predetermined personal calendar using subscriber data stored in the locator;

forwarding the update data from the locator to a first server, wherein the first server is linked to the network and linked to the predetermined personal calendar; and

using the update data to update the predetermined personal calendar corresponding to the subscriber data.

17. (Original) The computer-readable medium of claim 16, wherein the network is the Internet.

18. (Currently Amended) The computer-readable medium of claim 16,  
wherein the predetermined personal calendar is stored in a second server which is  
linked to the first server.

19. (Currently Amended) The computer-readable medium of claim 16, wherein  
the predetermined personal calendar is a commercially available Internet linked calendar.
